**Problem:** Lack of customization options

**Heuristic:** H3, H7

**Description:** The creation of contests should allow for further customization, such as: an open description via text-field, trending tags to stimulate community engagement and (maybe) the choice to have a personalized trophy-type icon/emoji which could then identify the voting action in each content.

**Correction:** Adding further customization/personalization options for creating the contest that would enrich its creative/artistic aspect.

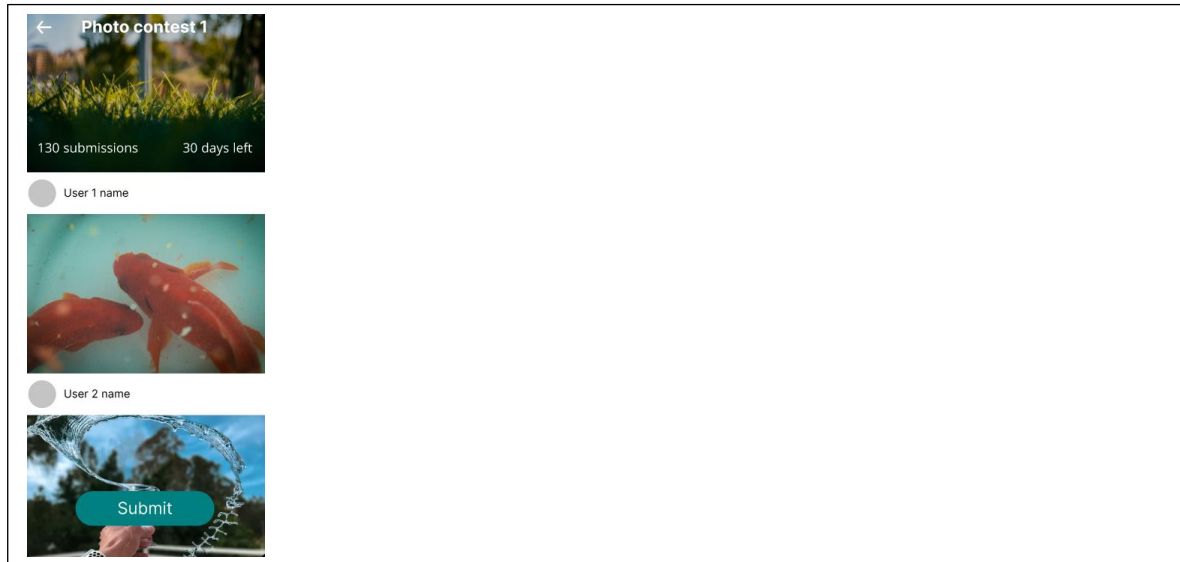

**Severity:** 2

**App Name:** *Creator Contests*

**Task:** *Vote In Contest*

**Student Name (Expert):** *Pedro Costa (43254)*

**Nielsen Heuristic:** H1-H10

**Problem:** Framing of content/voting status

**Heuristic:** H1, H6

**Description:** Since the top banner is also an image, the separation of each slot for user/content below may at first not be so obvious. It is also not clear in which picture the vote was set after voting.

**Correction:** Maybe adjusting the framing of content and adding a translucent trophy icon on top-right of each image (for example) that would change to highlighted after voting.

**Severity:** 3
